## **DETAILED ACTION**

### ***Claims***

Claims 38-43 are amended. Claims 68-73 are added.

### ***Election/Restrictions***

Due to the added species specific limitations to base claims 38-43 and due to search results including numerous commonly owned references that cover patentably distinct species specific variations of the claimed invention, the following restriction is required.

Applicant is reminded that relevant commonly owned references and copending Applications shall be identified by IDS in all Applications before the office.

This application contains claims directed to the following patentably distinct species:

Species A, drawn to a display device comprising a pixel electrode that overlaps with an upper electrode with an insulation film therebetween to provide capacitance (see claims 10, 11, 21, and 22).

Species B, drawn to a display device comprising a pixel electrode and an upper electrode of the sensor formed on the same substrate wherein the pixel electrode does not overlap with an upper electrode with an insulation film therebetween to provide capacitance (see claims 38 and 40-43).

Species C, drawn to a display device comprising a pixel electrode formed on one substrate and an upper electrode of the sensor formed on an opposed substrate (see claim 39).

The species are independent or distinct because of their mutually exclusive structure that must be considered patentably distinct in light of the history of claim amendments and in light of a careful review of commonly owned patents and pending Applications.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from A-C for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
